

Go4Clients – Landing Integration

The following document describe the procedure to integrate your application with the events triggered by the G4Clients landing pages platform.

Description

A form designed in G4Clients landing page platform, can send in real time the form content to your any application via API., more detailed example as follows:

1. Design the landing page, add all the fields required, you can add as many as you want of any type. Check Illustration 1 for more details.

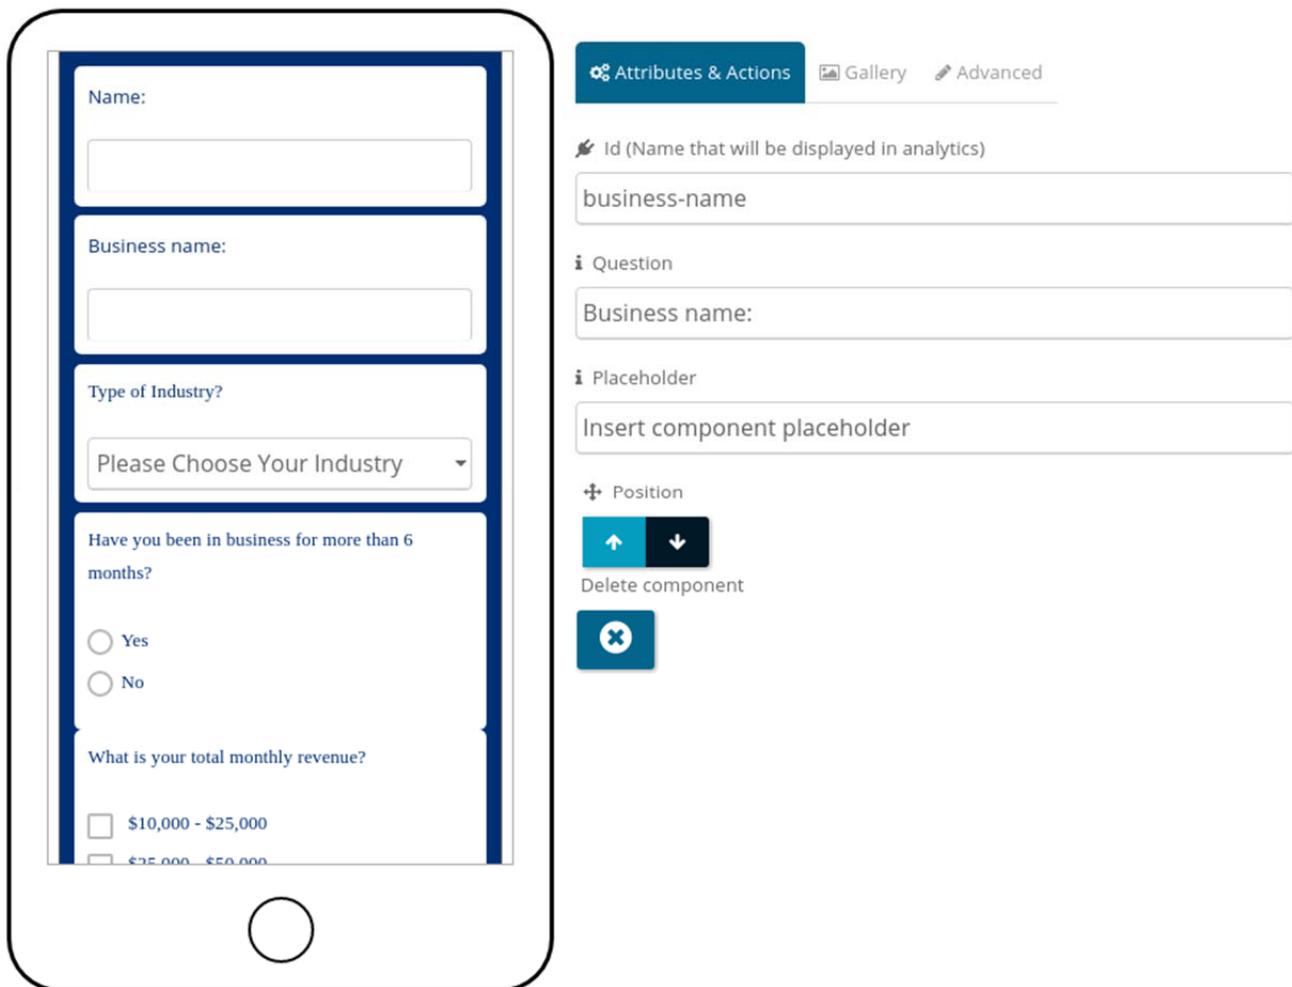

Illustration 1: Landing page example

2. Configure your callback URLs and email inside your go4clients account:

Select settings under your user name menu

Purchase Plan Wallet: \$1,999.80 Plan Balance: \$0.00 **David Cadena** Logout

Balance: \$0.00 **David Cadena**

- \$ Purchase Plan
- Settings**
- Recharge your wallet
- Manage credit cards
- Purchase numbers & keywords
- Rates
- Users

Under SMS tab or Landing Pages tab (if exists) edit the options shown

Form/Survey callback URL for answers

Event callback URL

Event E-mail notification

Form/Survey callback URL for answers:

URL where you are going to be expecting notifications with the information filled by your clients using Forms/Surveys from Go4Clients. Go4Clients will call this URL via API using an HTTP – POST request with a key – value representation of the form/survey your client just submitted and the precise information about your campaign and the person who performed the action.

Information provided:

```
{  
  
  "code": "qjA842", --> --> code  
  
  "device": "mobile", --> --> opening device  
  
  "browser": "Chrome", --> --> browser used  
  
  "mobileNumber": "573043499118", --> --> mobile number  
  
  "fields": { --> --> Form / Survey fields  
  
    "id_form_phone": { --> --> field id  
  
      "key": "Phone", --> --> name / question  
  
      "values": ["315"] --> --> value / answer  
  
    },  
  
    "id_form_text": { --> --> field id  
  
      "key": "Text", --> --> name / question  
  
      "values": ["Texto"] --> --> value / answer  
  
    }  
  
  }  
  
}
```

Event callback URL:

URL where you are going to be expecting notifications with the information about the actions your client makes inside each of your landing pages. Get notifications when your clients open a landing page or any call to action performed inside the landing page. Go4Clients will call this URL via API using an HTTP – POST request with the precise information about your campaign, the action performed and the person who made the action.

Information provided:

Opening event

```
{  
  
  "code": "qjA844", --> --> code  
  
  "device": "mobile", --> --> opening device  
  
  "browser": "Chrome", --> --> browser used  
  
  "mobileNumber": "573043499118", --> --> mobile number
```

"sendingLandingDate": 1502311463000, --> --> sending landing date

"eventDate": 1502311527425, --> --> event date

"eventType": "OPEN" --> --> event type

}

Other events

{

"code": "qjA844", --> --> code

"device": "mobile", --> --> opening device

"browser": "Chrome", --> --> browser used

"mobileNumber": "573043499118", --> --> mobile number

"sendingLandingDate": 1502311463000, --> --> sending landing date
